Contract Monitor

SUBJECT: Aerial Surveillance Imagery Interpretation  
and Analysis Support for ACDA/WEC

The following information is submitted in accordance with your request. During FY 1971, aerial imagery interpretation support was provided under ACDA/WEC-FO/RA-110, for Field Study 33, "Arms Control Aspects of U.S. Deactivated Missile Launchers." The objective of this study was that of identifying and describing indicators which could be used to determine whether a missile site is operational, demilitarized and/or deactivated. This report was received during June 1971 and cost approximately \$2,500. A second project under this RA supported Field Operations' participation in the [REDACTED] program which is a high-altitude, side-looking radar (SLAR) test being conducted by DDR&E. This study supported FS-31 and was entitled "Overhead Radar Reconnaissance Exploitation Potential for Arms Control Verification." In this study, analysis of radar imagery was performed to determine what kinds of information was pertinent to arms control verification. The completed study was received in August and cost approximately \$7,000.

25X1A

All services were performed satisfactorily and all reports and materials have been received.

Aerial surveillance data will continue to provide a major input to ACDA field tests and in-house studies during FY 1972 related to SALT, MBFR, CBW and Peacekeeping study projects. In view of the very low level (man-years)

of effort involved in this project, and the close technical relationship between the work to be performed and that of NPIC-sponsored research projects, it appears mutually desirable that it be accomplished through a reimbursable agreement.

Sincerely,

25X1A
